▼ MODULE 1: WHAT IS ARTIFICIAL INTELLIGENCE?

≡ About this module

≡ What is AI?

≡ What is the difference between AI and augmented intelligence?

≡ What does AI do?

≡ What predictions can AI make?

≡ How is AI evolving?

When learning about artificial intelligence, you'll come across the term **augmented intelligence**. Both terms share the same objective, but have different approaches.

Augmented intelligence has a modest goal of helping humans with tasks that are not practical to do. For example, "reading" 1000 pages in an hour. In contrast, artificial intelligence has a lofty goal of mimicking human thinking and processes. However, it's important to note that AI today is not mature enough to perform independent tasks such as diagnosing cancer.

Watch the following video to learn about the differences between artificial intelligence and augmented intelligence.
